

Polyurethane timing belts from BRECO for the food industry

Blue and steel or transparent and stainless steel. Always the perfect choice.

BRECOprotect[®] and food compliant BRECO[®] and BRECOFLEX[®] timing belts are

- timing belts specifically designed to meet the stringent requirements of the food industry.
- timing belts made of polyurethane, which meet the compliance criteria of the FDA Code of Federal Regulations, Sec. 177.1680, the European Framework Regulations (EC) 1935-2004, Regulation (EU) No. 10/2011 and the European Commission Directives 90/128/CEE and 96/11/CE.
- timing belts that offer a high resistance to cleaning agents.

Polyurethane timing belt with certified conformity for the food industry

The use of machine components in the food industry is subject to strict hygiene requirements. BRECO offers timing belts that are specifically designed for this field of application.

The particular feature of the BRECOprotect[®] type series, (available as open length or joined timing belts) is that the steel tension members are completely enclosed. The timing belts are designed without the normal coiling nose to prevent deposits, making them much easier to clean. The blue colour of the BRECOprotect[®] timing belts meets the current colour requirements of the food industry.

Alternatively, BRECO offers the BRECO[®] and BRECOFLEX[®] timing belts made of the material TPU FD1 or TPU AU1 in a transparent version with stainless steel tension members.

Please do not hesitate to contact your BRECO sales partner for assistance in selecting the correct timing belt type for your application.

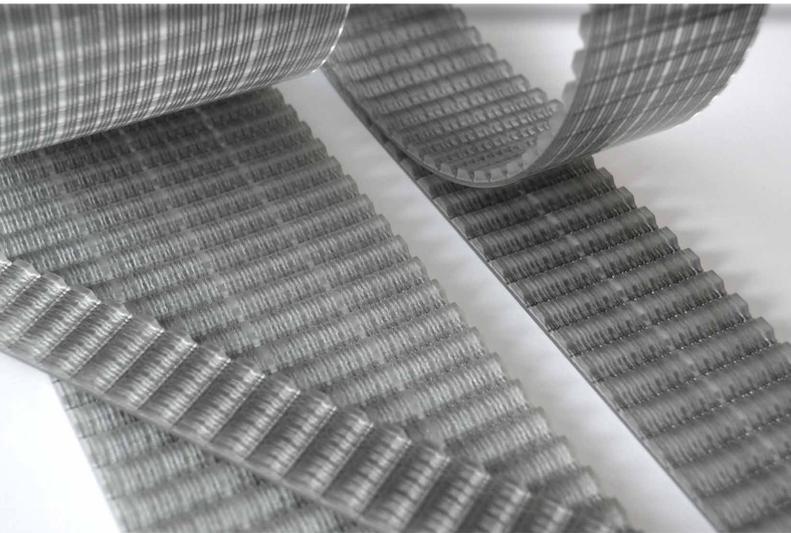

BRECO is a member of Mulco-Europe EWIV
