

BRECOgreen BRECOFLEXgreen

Sustainable. Environmentally friendly. Green.

BRECOgreen / BRECOFLEXgreen

This name stands for a timing belt program that benefits not only you as a user but all of us, as inhabitants of our planet. With the concept BRECOgreen or BRECOFLEXgreen, we as a belt manufacturer have created more than just another product. The suffix "green" stands for optimizing material use through a 37% share in renewable raw materials.

And BRECO wants to make sure those raw materials don't come from the human food chain. Absolute reliable operation is guaranteed, since the resilience and life cycle of the product series BRECOgreen / BRECOFLEXgreen are the same as those of belts made of petroleum-based thermoplastic polyurethane.

Even small steps toward sustainability are important: They reduce the carbon footprint, serve as a model, and help open up new materials and procedures for other areas. For maintaining and improving our environment, the climate, and living conditions, we are fully committed to innovative technologies.

BRECOgreen BRECOFLEXgreen, is ...

a contribution to
ecological thinking

sustainable material
use through sustainable
raw materials

a smaller
carbon footprint

an end-use applicable
product alternative **with**
all the performance of
the standard

Always on the move for you
